R00001562
RCRA Records Center

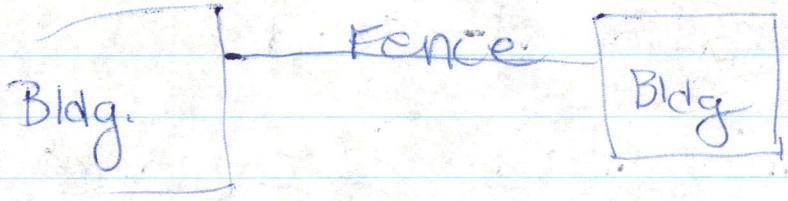

drums from drum storage area
to filter & settling tank then to
transfer tank (mobile) to still; solids
put into drums if blendable → blend;
if not → landfill
↳ then to drum
storage area

condition permit on taking drums of
solids immediately to drum storage area

non-distilled waste & still bottoms to
bulk storage tanks & contents to Systech

tanks - overflow control - regulates
both tanks - valve off tank not being
used - no continuous feed of tanks -
fence up between bldgs!

side & top portholes for inspection look to be 18" wide

bulk
tanks
conc. block
dike

tanks vented to atmosphere

overflow lines overflow to tank, level
actuated float shuts off air to pump

250 drums in drum storage area
No Smoking signs posted above
drums -

12x24 diked area for
incompatible waste in case have
incompatibles - do not plan to take
incompatibles

went thru comments in EPA letter to
KDHE; advised Reid that app. must be
sufficient to write draft permit; they
have been working on revised app. - it
looks better; Goetz offered to review ^{prior} _{final}
a draft of final copy or meet w/ them ^{submittal}
again to discuss app. KDHE plans to
send out comments in early Nov. -

get prelim. copies in prior to Thanksgiving -
ie by 11-15 we could have 1wk to review -

- check about use of Coliwasa -
problem w/ very thick waste - are
others using feed tubes -
